Experience

Quantitative Developer & Trader January 2026 – Present
Independent Trading *Remote*

- Built and operate a production Python trading platform ingesting Kalshi order-book events and multi-venue crypto reference feeds, with integrated order management, risk controls, reconciliation, and live monitoring.
- Developed a multi-terabyte research and replay stack for out-of-sample validation and post-trade analysis of latency, slippage, fill behavior, and strategy capacity.
- Executed approximately **30,000 live trades** and **$2M in notional volume**, generating **$20K+ in profit** and peaking at **#75 by all-time profit across Kalshi's crypto markets**.
- Own the full strategy lifecycle from pricing and quoting models through deployment and live iteration, accounting for resolution mechanics, adverse selection, and correlated inventory exposure.

Co-Founder & Engineering Lead June 2025 – May 2026
Darch AI *Remote*

- Built and operated a Python/FastAPI, Node.js, and FFmpeg content-distribution platform processing **3,000+ video jobs per month** and supporting content reaching **20M+ monthly impressions** at **85%+ margins**.
- Led backend development and production operations across API services and media-processing workflows from initial build through scaled delivery.

Software Development Intern June 2025 – August 2025
National Institute of Standards and Technology (NIST) *Gaithersburg, MD*

- Built an internal RAG help-desk assistant with document-ingestion, retrieval, reranking, and deep-search pipelines in a custom OpenWebUI fork.
- Added structured logging and failure-analysis instrumentation for monitoring system behavior and diagnosing retrieval and integration failures.

Machine Learning Intern June 2026 – August 2026
WVU Medicine *Morgantown, WV*

- Developed and validated anomaly-detection models over historical pharmacy data representing approximately **$100M in annual claims**, surfacing abnormal treatment-denial spikes; delivered the completed modeling core for production-workflow integration.
- Built internal integration tools and documentation connecting WVU Medicine's custom OpenWebUI deployment with additional systems and workflows.

Co-Founder June 2026 – Present
Heron *Remote*

- Built pricing, liability, and hedge-execution models for conditional merchant promotions hedged through prediction markets; signed initial bar clients across four U.S. cities.

Education

Case Western Reserve University Expected May 2028
B.S. in Computer Science; Secondary Major in Mathematics *Cleveland, OH*

- Relevant Coursework: Algorithms, Operating Systems, Data Structures, Linear Algebra, Statistics, Discrete Mathematics

Technical Skills

Languages: Python, Java, JavaScript/TypeScript, C, SQL
Backend & Infrastructure: FastAPI, Node.js, Linux, Docker, WebSockets, REST APIs, FFmpeg, Git
Data & ML: PostgreSQL, MongoDB, PyTorch, pandas, NumPy
Spoken Languages: English, Mandarin Chinese
